

TNS30 Trailer Nose Support

Trailer Nose Support

The trailer nose support provides additional stability to a trailer when it is not coupled to a tractor or converter dolly.

The unique hole pattern in the outer housing and retractable tube provide maximum vertical adjustment.

A standard finish on the support is a powder coat finish. For additional available options and colors, please contact our sales department at sales@jostinternational.com or 800-253-5105.
